

## Identity E2E - Task Description:

Write a test automation suite that does the following.

1. Reads given input file: car\_input.txt
2. Extract vehicle registration numbers based on pattern(s)
3. Each number extracted from the input file is fed to any car valuation website for e.g.  
<https://motorway.co.uk/>  
(Perform vehicle details search from the car valuation page)
4. Compare the output returned by the car valuation website with the given car\_output.txt
5. Highlight/fail the test for any mismatches. Showcase your skills so it's easier to add more input files in the future. Utilise Python for the language with browser automation tools. Use design patterns where appropriate.
